It is made of high impact absorbing urethane polymer and is chemical and fuel resistant and flame retardant with operating temperatures from  $-20^{\circ}$  to  $200^{\circ}$ F. This design offers ease of use, better grip, mor flexibility and remarkable durability and fits perfectly over the sensor with no modification necessary.

Why Fjord BVT-2325 bumper instead of the "original bumper"? It simply out performs. Rubber-cut and tear resistant, much higher abrasion level, longer usage and longer use life than any others available.

So why not make the switch to the more reliable and durable bumper available for the Thiem F571-*FJORD AVIATION PRODUCTS BVT-2325*.
